

C1000 stereo preamplifier

- C1000 utilizes a multi-chassis design where the control and power section is isolated from the pure audio sections. This lavishly engineered, unorthodox approach accomplishes absolute isolation of the two main preamp functions: control and sound.
- Inside each C1000 preamplifier module, the left and right channels are electrically and mechanically isolated from each other to allow true dual mono operation - resulting in the ultimate stereo separation and sonic purity.
- C1000 may be configured either as a tube preamp to produce organic tube sound, or as a pure transistor preamp for the absolute finest crystalline clear sound quality. C1000C controller can further be combined with both the 'T' tube and 'P' transistor preamp sections simultaneously, allowing the luxury of choice.
